S/HS

Total protection of the working area by means of last generation CE marked safety photo-cells. Sensor bars as commands for trolley displacement and cutting. The working flexibility makes this series ideal for any kind of material and application. Leather, sheets and synthetic rolls. Thanks to the ample working surface it is possible to cut large leathers and synthetic materials up to 2000 mm wide. Material loading can be done manually from the front or from rear side of the machine by means of motorized material feeders driven by pedal commands available on demand. For a quicker working cycle, together with the feeder, as option it is possible to connect suitable 4,8,12-seat roll-holders. Low energy consumption. Higher daylight and stroke on the HS
