S Series

Swing arm presses ATOM S series are fitted for many application fields: from footwear to leather goods up to tech textile and gaskets on a wide range of materials. They have been the most used models for more than 50 years and are available in 18 different configurations depending on cutting power, working surface sizes, length of the swing arm. They are divided in 2 families, SE and S. The SE model has two control push buttons and one potentiometer for setting the cutting power. The S model adjusts the cutting power by means of a three position selector. Both models are available in CE or Extra CE version.
